

Glasselephant Hamm / Germany 1981-84 Design Horst Rellecke

pop up fotos

For the 1st State Garden Fair in North-Rhine-Westphalia the ruin of the former coal washing plant of the Maximilian coalmine was altered to a walk-in-sculpture, an elephant of glass and steel, whose body has become now a greenhouse. It is the biggest building in animal figure of the world. Height 35 m, length 54 m, enclosed space approx. 20,000 cbms. Inside ten kinetic Rellecke objects are shown in a permanent exhibition.

In 2009 the Glass Elephant got a new light technology. The old fluorescent lamps were substituted by LED modules. The LEDs are suppost to generate all colours of the rainbow and a huge number of variations up to entire light shows. The installation was initiated on the occasion of the festivities for the 60th birthday of the State North-Rhine-Westphalia with a light- and sound show. Premiere of the especially composed music "Elephants delight" by the musicians of "Crystal Silence" accompanied by facade climbers of "Climbix".

newspaper "Westfälischer Anzeiger Hamm" 6/27/2009: 10.000 visitors watched the light spectacle at the elephant.

On the left, above the elephant's right eye, a white dressed man stood in the window. From below he was to be recognised only shadowy. He leant back and then forward - then again. A few glowworms had already begun their own light show before the official beginning at 11:00 p.m. - to the joy of the waiting audience. Then, finally - music. The glass elephant's trunk lighted up in glistening light, the white men let themselves down by ropes from the windows and swung green light swords. Spontaneous applause. Now head, ears and trunk of the glass elephant changed the colours suitably to the mystic background music: Orange, Yellow, green, Red, sometimes slowly, sometimes hectically. Suddenly the explosion, from the back of the concrete animal rise fireworks in the night sky. At the end the elephant showes the colours of NRW: Green, White and Red. In the late evening about 10.000 visitors pursued the half-hour light spectacle to open North-Rhine-Westphalia Fair in the Maxipark.

1. Price with the concept "KLANGWALD - SOUNDING FOREST". A round footpath in the Arnsberg forest at the south of Lake Möhne with ten stations featuring sculptures and installations, which may be experienced by all senses beyond the pure design. The visitors are invited to operate the objects or to listen to them while the wind does it for them.
